CREATIVHEADS

SEO Studio

a simple guide

Click this. You land on the next screen.
Then click the next thing.
No technical knowledge needed.

1	**Prepare**	Studio writes a suggestion. The website stays as it is.
2	**Approve**	A person reads the before and after, then clicks Approve.
3	**Update**	WordPress changes only after that yes.

Your first day, click by click

Do these stops in order. Each box tells you where you are, what to click, and which screen opens next. The website does not change until Stop 6, when you click Approve.

	Stop	Click	You land on
1	**Sign in**	Open seo.creativheads.com and sign in.	Overview, the list of clients.
2	**Open the client**	Click the client name, or Open workspace.	That client's dashboard.
3	**Connect once**	Settings, then the WordPress plugin, then Client settings.	WordPress shows Connected.
4	**Find problems**	Left menu, Site Audit, then Run new crawl.	A list of problems, one row each.
5	**Prepare a fix**	Click the row, then Send for approval, then Continue.	New items waiting in Approvals.
6	**Say yes**	Left menu, Approvals, then Approve.	WordPress is updated for that one item.
7	**Look at the site**	Open the page named in the approval.	The new heading, title, or link is there.

> **Do Stop 3 only the first time**
> After WordPress says Connected, you skip Stop 3. Every later day starts at Stop 2, then Site Audit, then Approvals.

STOP 1

Sign in

This is the front door. You are not inside a client yet.

Click in this order

1. Open a browser and go to seo.creativheads.com.
2. Sign in with the email your Admin gave you.
3. Wait until the page finishes loading. Do not click around while it is still blank.

You should see

The heading All Clients Portfolio Overview, and a list or cards of websites. The pink Safe mode label is at the top. The left menu shows Overview.

Then go here

Stop 2. Click one client.

YOU ARE ON	CLICK	YOU LAND ON
Sign-in page	your email, then sign in	Overview

STOP 2

Open one client

Everything after this belongs to the client whose name is at the top. Check that name before every approval.

Click in this order

1. On Overview, find the website, for example Level8.
2. Click the client name, or the button Open workspace.
3. Look at the top bar. The client name must be the one you meant.

You should see

The Client dashboard: clicks, visits, and the latest audit for that one site. The left menu now has Site Audit, Schema, Approvals, Keywords, Content Plan, and Content Pipeline under that client's name.

Then go here

First time on this website: Stop 3. Already connected: skip to Stop 4.

YOU ARE ON	CLICK	YOU LAND ON
Overview	the client name	Client dashboard

STOP 3

Connect WordPress, once

An approval can write to the site only after this connection works. Ask an Admin if you do not see Settings.

Click in this order

1. Click Settings in the left menu.
2. In the WordPress plugin box, click Download plugin. Save ch-seo-connector.zip.
3. In the client's WordPress, open Plugins, Add Plugin, Upload Plugin. Choose the zip, Install Now, then Activate. If it is already there, choose Replace current with uploaded.
4. Back in SEO Studio, on Settings, click Client settings next to this client.
5. Open the tab Integrations & connections. On the WordPress card, click Connect WordPress.
6. Paste the WordPress username and the application password (WordPress: Users, Profile, Application Passwords, name it SEO Studio). Click Save & test.

You should see

A green Connected on the WordPress card, and a line that mentions connector 1.2. If it says an older number, upload the plugin again and click Test connection.

Then go here

Stop 4. Left menu, Site Audit.

YOU ARE ON	CLICK	YOU LAND ON
Settings	Download plugin, then Client settings	WordPress: Connected

STOP 4

Run Site Audit

This visit reads the pages and builds the list. It does not change the website.

Click in this order

1. Click Site Audit in the left menu.
2. At the top right, click Run new crawl. A box explains it. Click Continue.
3. The crawl takes a while. When you come back, click Check crawl if it is still running.
4. When the list appears, click the first row, or the button Inspect.

You should see

A list of problems. Each row has a name, how urgent it is, and how many pages. The right side explains the one you clicked, with a few page addresses.

Then go here

Stop 5, if the right side shows Send for approval. If that button is missing, pick the next row.

YOU ARE ON	CLICK	YOU LAND ON
Client dashboard	left menu, Site Audit	The problem list

STOP 5

Send one problem for approval

This prepares the change. The live page stays the same until Stop 6.

Click in this order

1. On the right-hand panel, click Send for approval.
2. Read the box. It names the client. Click Continue.
3. Wait until it finishes. A message tells you how many items were prepared.
4. If the message is red, read it. Do not click it again and again. The last page of this guide says what to do.

You should see

A success message, and a number on Approvals in the left menu. Titles, descriptions, picture text, missing main headings, broken links, and redirects can be prepared this way. Slow pages and compression have no Send for approval button. Leave those.

Then go here

Stop 6. Click Approvals in the left menu.

YOU ARE ON	CLICK	YOU LAND ON
Site Audit, right panel	Send for approval, then Continue	Approvals, with new items

STOP 6

Approve it

This is the only click that writes to the website.

Click in this order

1. Click Approvals in the left menu.
2. Click one item. Read the current value and the proposed value.
3. Check the client name at the top is still the right website.
4. If the new text is true, click Approve. If it is wrong, click Reject and write a short note.
5. Approve a few, not the whole list, the first time.

You should see

The item leaves the waiting list. A title, description, heading, link, or redirect is now stored in WordPress. An article is saved as a WordPress draft, not published.

Then go here

Stop 7. Open the live page named on that item.

YOU ARE ON	CLICK	YOU LAND ON
Approvals	Approve	WordPress now has that change

STOP 7

Check the live page

Studio can store the change and the public page can still look old for a few minutes if a cache is on.

Click in this order

1. From the approval, open the page address.
2. Look for the thing you approved: the main heading, the Google title, the picture text, or the link.
3. If it looks right, go back to Approvals and approve the next few of the same kind.
4. If it looks wrong, stop and tell an Admin. Do not approve the rest.

You should see

The page a visitor would see, with the change you approved. For a missing main heading, the words stay the same. The heading is now the main one.

Then go here

You are set up. The next pages are the other screens, each as a short click path.

The other screens, as click paths

You do not do these on day one. When you need one, follow its clicks. Each one still ends in Approvals if it changes the website.

Schema

YOU ARE ON	CLICK	YOU LAND ON
Client dashboard	Schema, in the left menu	Schema

1. Click Schema.
2. Click Send for approval, then Continue.
3. Go to Approvals and approve the labels you agree with.
4. Back on Schema, click Test page in Google if you want Google's own check.

> **You should see**
> Hidden labels for the business, a question and answer, or an article. Studio only uses facts already on the page.

Keywords

YOU ARE ON	CLICK	YOU LAND ON
Client dashboard	Keywords, in the left menu	Keywords

1. Click Keywords.
2. To bring in searches the site already gets, use the import from Search Console if you see it.
3. For new ideas, click the research button, type one topic, and Continue. This is a paid lookup.
4. For a search sitting around positions 4 to 20, click Send for approval. Then go to Approvals.

> **You should see**
> A list of searches, with how often people look for them and where the site sits in Google.

Content Plan

YOU ARE ON	CLICK	YOU LAND ON
Client dashboard	Content Plan, in the left menu	The month's calendar

1. Click Content Plan.
2. Use the arrows to pick the month.
3. Click Add topic and type the title.
4. The topic sits on a day. It is not written yet.

> **You should see**
> A calendar of what to write. Nothing is published.

Content Pipeline

YOU ARE ON	CLICK	YOU LAND ON
Content Plan	the topic, or Content Pipeline in the left menu	The draft

1. Open the topic from the plan, or click Content Pipeline and open the item.
2. Read the draft. Tick the checks that are true.
3. Click Submit for review.
4. A person who can approve clicks Approve. WordPress saves a draft. Publish it in WordPress only when you mean to.

> **You should see**
> The article, still a draft. Safe mode does not publish it.

AI Visibility

YOU ARE ON	CLICK	YOU LAND ON
Client dashboard	AI Visibility, in the left menu	AI Visibility

1. Click AI Visibility.
2. Save a real customer question.
3. Run a check for one engine. This is a paid lookup.
4. If the brand is missing, turn that question into a content brief. That brief goes through Content Pipeline.

> **You should see**
> Whether ChatGPT, Gemini, or a similar tool mentioned the brand and linked the site.

Reports

YOU ARE ON	CLICK	YOU LAND ON
Client dashboard	Reports, in the left menu	Reports

1. Click Reports.
2. Create the report for the month.
3. Read it and add two or three plain sentences.
4. Submit, then Approve. The numbers stay frozen.

> **You should see**
> A monthly pack you can download as a PDF.

If a click shows a red message

Go back to the screen named here. Do not start again from Stop 1.

Page builder / H1 message
Go to Stop 3 and upload the plugin again, version 1.2. Then return to Site Audit, click the Missing H1 row, and click Send for approval.

Nothing was sent for approval
Stay on Site Audit. Read the sentence. Pick another row, or open Approvals. The items may already be waiting there.

A fixed page is still in the list
Click Site Audit again. Studio checks the live address. You do not need Run new crawl for that.

Approve did not change what I see
Open the exact address on the approval. Wait a minute and refresh. If it is still old, tell an Admin before you approve more.

There is no Send for approval button
Click the next row. Speed, compression, and heavy code stay on the list for the person who looks after hosting.

Every later morning
Sign in. Click the client. Click Site Audit. Click a row that has Send for approval. Continue. Click Approvals. Approve a few. Open one live page.
